Here we have tried to create a Penalty Shooting Game. This is a two player game, the players can choose their country and accordingly the jersey will be created. One of the players can throw the ball in the goalpost with the left, right and up arrow button from the keyboard in the first shot. The arrow buttons basically control the ball whether it will turn to left or right and also the height. Another second player will use the "A", "W", "D" and some other keys for controlling the goalkeeper. Then in the next shot, another player will get the chance to shoot and the first player will this time defend.

Here is the sketch of the input-output scratch idea:
